

**County Council Local Committee for Eden – 17 January 2018
Highways Non-Devolved Capital Programme 2018-19
Appendix 2 – Draft Integrated Transport Block**

1. Engineering Safety Studies and Implementation Measures (ESS)

Engineering Safety Schemes are works carried out on the highway aimed both at reducing the number and severity of road casualties and at preventing casualties. Reduction works include remedial engineering measures such as markings and signs, visibility improvements, crossings, junction and signal improvements. Prevention work focuses on Road Safety and User Audits for new infrastructure and alterations.

The ESS schemes specifically identified in the Eden area for 2018/19 are shown below. An allocation has also been made for the countywide development of Road Safety Studies, but it is not yet known whether any of this work will be carried out in Eden.

Scheme Name	Description	District	Delivery year	Cost to CCC
TBC				
			TOTAL	TBC

2. Countryside Access Improvement Schemes

The Countryside Access Improvement programme applies to areas outside the Lake District and Yorkshire Dales National Parks. Works within the countywide programme include surface and furniture upgrading, path construction, ditching and drainage work. The programme involves working with landowners, community groups, partner organisations and user groups to maximise match funding and in-kind support. Schemes within Eden are shown below.

Scheme Name	Electoral Division	Work Type	Description	Potential funding sources	Cost to CCC £
TBC					
				TOTAL	TBC
